HELP

	Help	F1

CUSTOM KEYBOARD SHORTCUTS

Revu keyboard shortcuts can now be customized! So you can remap existing Revu shortcuts to match similar functions in other programs you already use, or add new shortcuts to create your own personal list of frequently used commands. New customizable shortcuts include batch tools, sketch tools, cut content, erase content and lots more.

**How to Create Custom Keyboard Shortcuts**

Select **Revu** on the Menu bar and click Keyboard Shortcuts. In the Keyboard Shortcuts window, select the tool or command you want to shortcut, enter the keystroke in the Shortcut field, and click **Add**. To use a shortcut already assigned to another tool, click **Reassign**.

All shortcuts listed in Revu's menus system will be automatically updated once a new shortcut has been assigned, making them easier to find and remember.

Middle Button (wheel)

Pan = Click + Drag
Re-Center View = Double-Click
Left Button

Tool Operation = Click
Pan = Click + Spacebar
Multi-Select = Shift + Click + Drag

Right Button

Context Menu = Click
Multi-Select = Click + Drag

Middle Button (wheel)

Zoom In/Out = Scroll

Pan Model = Click + Drag

Return to View = Double-Click

Left Button

Rotate Model = Click + Drag

Right Button

Context Menu = Click

Multi-Select = Click + Drag

MODIFIER KEYS

The Alt, Shift and Ctrl keys aren't limited to keyboard shortcuts. They can also modify the way your mouse interacts with Revu, which can be a real timesaver. Some examples include:

General

Hold **Ctrl** to toggle the mouse wheel between zoom and pan.

Hold down the **Spacebar** to pan in the document without deselecting the markup you're creating or editing. Release the **Spacebar** to return to your markup.

Rotating Markups

Markups will snap to 15-degree increments when rotated using the top control point. Hold **Shift** while rotating a markup to release that snap and allow rotations in 1-degree increments.

Moving Measurement Captions

Hold **Shift** while clicking on the caption of a **Measurement** markup to move the caption separately from the markup.

Copying Markups

Ctrl + **Shift** + **Click** a markup to copy it and move the copy in a straight line.

Drawing Straight Lines

Hold **Shift** while using **Line** , **Arrow** , **Polyline** , **Polygon** or **Measurement** markups to draw a straight horizontal, vertical or 45-degree line.

Hold **Shift** while using **Pen** or **Highlight** tools to draw straight lines horizontally or vertically.

Want to know more? You'll find the complete Modifier Key List on the Bluebeam Support site.
